WEIGHTS and Measures.

Japanese.	British Equivalents.
1 ri... .. =	2.44 miles
1 ri (marine)	1.15068 miles
1 cho = 10 tan	2.45 acres
1 tsubo	3.953 square yards
1 koku = 10 to = 100 sho (liquid) ...	39.7 gallons
1 koku 10 to 100 sho (dry) ...	4.96 bushels
1 koku (capacity of ship)	$\frac{1}{6}$ ton
1 kin or catty	1.32 lbs. (avoir.)
1 picul = 100 kin	132.277 lbs. (avoir.)
84 kin	1 cwt.*
1,680 kin	1 ton* .

* About.

NOTE.—In the Formosan land measure 1 ko is slightly less than 1 cho, being equivalent to 2.42 acres.

PORTS Open to Foreign Trade.

1. General shipping: Keelung, Tamsui, Anping, Takow, Toko (Tonkong), Makyu (Makung).

2. Junk traffic only: Kyuko (Kiukong), Koro (Oulong), Gosei (Tokakutsu), Rokko (Lukong), Tosekiko (Toncho), Hoteishi (Poteitsu), Hokumonsho (Pamunsu).

PRINCIPAL TOWNS, with their Population and Industries.

Town—	Population.	Industries.
Taihoku (capital) ...	96,500	Tea, camphor
Tamsui	6,350	Sea port
Keelung	18,000	Chief port for Japan, tea
Shinchiku	16,300	Tea, camphor, China grass
Taichu	12,800	Rice, camphor, sugar
Rokko	19,200	Sea port
Shoka	15,600	Rice, sugar
Kagi	22,500	Rice, camphor, sugar
Anping	5,700	Sea port
Tainan	59,600	Sugar, rice
Takow	13,800	Port for sugar
Taito (on east coast)	1,800	Sea port, camphor
Kwarengo (on east coast)	2,700	Camphor
Gilan (on east coast)	16,000	Camphor, rice
Boku seki kaku (on east coast) ...	7,100	

NOTE.—Throughout this report the Japanese yen has been converted into sterling at 2s. 0½d.

Reference to previous Report, Annual Series No. 5229.

Report on the Trade of the Island of Formosa for the Year 1913

By MR. CONSUL HARRINGTON.

Total trade.—The following table shows the total import and export trade of Formosa (with Japan and foreign countries) for the year 1913, with the figures of the previous year added for comparison:—

					1912.	1913.	Decrease.
					£	£	£
Imports	6,393,240	6,212,150	181,090
Exports	6,400,750	5,449,040	951,710
Total	12,793,990	11,661,190	1,132,800

Thus while the imports suffered the small decline of 2·8 per cent., the exports fell off 14·9 per cent., making the total decrease about 8·9 per cent. The exports showed special weakness, the figures being below those of all years since and including 1910.

Condition of trade.—The disappointment over the trade of 1913 was almost entirely centred in the exports. The year 1912 had represented a minor decline in values leaving the island, and it had been confidently expected that, if no destructive storms supervened, a steady advance would take place.

No exceptional damage could be laid to the weather during 1913; nevertheless trade (particularly exports) was generally very unfavourable. A variety of causes contributed to the decline. The financial and commercial depression in Japan had, of course, a general influence, but the specific reasons were still more important. Sugar failed

entirely to recover the set-back of storms, deteriorated seed, &c., of the previous year; only a little more than a third of the quantity of 1912 (itself a bad year) was exported during 1913; fortunately an advance in price slightly ameliorated the position. Tea was disappointing, while several manufactures and productions which had been gradually expanding in previous years mostly receded or showed no vitality.

Fortunately there was an excellent rice crop, admitting of large exports, and prices generally were good; further, Government expenditure on works, railways, &c., was well maintained, so that employment and business on the whole were not so bad as trade statistics might indicate. The following table gives the trade figures of recent years, and shows the decline in exports to below the amount for 1910 :—

Year.	Imports.	Exports.	Total.
	£	£	£
1909	3,736,070	4,899,900	8,635,970
1910	4,994,290	6,117,180	11,111,470
1911	5,440,410	6,603,150	12,043,560
1912	6,393,240	6,400,750	12,793,990
1913	6,212,150	5,449,040	11,661,190

Imports.—The total imports were 6,212,150*l.*, of which 4,372,230*l.* (70 per cent.) is recorded as coming from Japan; this amount probably includes goods really coming from abroad transhipped at Japan ports.

The principal items imported directly from foreign countries were :—

	£
Opium	385,240
Rice	216,230
Fertilisers (oil cake)	167,500
Kerosene oil... ..	94,060
Cotton goods	89,880
Tobacco	70,840
Drugs, various	68,690
Paper, Chinese	67,410
Timber	64,780
Beans	48,640
Machinery	38,230
Packing mats	34,530
Gunny bags	32,720
Coal	29,930
Rails and fittings	28,400

Other imports were metals, iron pipes, condensed milk, porcelain and earthenware, tea lead, &c.

The principal imports coming from Japan were :—

	£
Provisions (mostly fish, vegetables, tinned goods, &c.)	775,430
Cotton goods	416,150
Iron and steel goods	349,730
Timber	261,310
Fertilisers	180,910
Flour... ..	167,470
Cement	161,110
Saké	155,600
Sugar, refined, and candy... ..	155,220
Rice	104,310
Drugs	102,720
Machines and instruments... ..	93,080
Paper... ..	90,510
Hosiery and clothing	88,720
Tobacco and cigarettes	70,620
Animals and plants... ..	63,320
Iron ore	58,210
Matches	54,360
Woollen and silk tissues	54,060
Beer	54,000
Japanese clogs and boots	44,280
Bean oil	43,860
Railway sleepers	39,490
Beans	33,020
Dyes and paints	30,750

Other imports were kerosene oil, soap, yarns, gunny bags, coal, porcelain, glassware, metals, clocks and watches, vehicles, umbrellas, lamps, &c.

The decrease in the imports from both Japan and foreign countries was spread over a large number of items. Of the various countries the United Kingdom suffered the greatest set-back, the 1913 total being less than half that of the previous year; practically all classes of cotton goods, some woollens, condensed milk, building materials, engines and machinery showed a decline; in many cases, however, the decrease was rather due to a dwindling demand than to competition. The small Australian trade, as well as that from Hong-Kong and Singapore, declined considerably.

Imports from the United States, Germany and China all declined, while those from French and Dutch India, Turkey and Persia showed large increases.

The small decline in Japanese imports was spread over a large number of items, cotton goods and timber showing the greatest fall; while provisions, iron and steel, refined sugar, cement and other articles increased substantially.

Locomotives and machinery.—Under these headings there was an all round decline, mainly due to the completion of orders for the time being, and especially to the bad condition of the sugar industry; of sugar machinery the total dwindled from 106,570*l.* to 6,350*l.*, practically all from the United Kingdom.

Under the heading of locomotives, tenders and engines generally, the foreign imports were :—

	£
United States	8,200
Japan	4,030
United Kingdom	3,810
Denmark	500
Germany	120

All figures, except those for Denmark, show a large decline from 1912.

Railway materials.—The imports, mostly rails and fittings, were as follows :—

	£
United States	23,270
Japan	10,120
Germany	3,940
Denmark	3,240

Japan and Germany show each a large decline.

Bridge and building materials.—Imports of these items came from :—

	£
Japan	35,040
United Kingdom	560
Germany	180

Japan showed a small increase, but both the United Kingdom and Germany declined very greatly, while the large American import disappeared entirely.

Textiles.—Although the import of textiles declined generally, Japan held her own far better than foreign countries, a natural result of the tariff and of the close business connection between the countries. Cotton goods came from :—

	£
Japan	416,150
United Kingdom	40,910
Hong-Kong	6,100
Netherlands	3,270

The last three cases include only shirtings and sheetings, satins and Italians, but the total of all cottons for foreign countries was only 89,880*l.*, so that the advantage enjoyed by Japan is apparent.

The trade in woollen tissues is naturally small in the hot climate of Formosa, but while the small foreign imports declined from the previous year, those from Japan remained stationary. In woollen cloths and serges the import from Germany (6,250*l.*) showed an increase at the expense of the British articles, which declined to 960*l.*

Oil cake.—Practically all the fertiliser imported is bean oil cake from China and Manchuria. The 1913 figures showed a considerable decline on those of the previous year, due to stocks in hand at the end of 1912.

Gunny bags.—Imports from Japan (21,930*l.*) were stationary, but from foreign countries (32,720*l.*—practically all from India) there was a considerable recovery from the decline of 1912. This was due, it is stated, to the special demand of the good rice crop. The bag from Japan is considerably cheaper than its foreign competitor, and even if size and quality be the reason, it may be difficult for the latter to hold its own in normal circumstances.

Kerosene oil.—In value of import from abroad the United States still held premier place, but in quantity the Dutch Indies took the lead during 1913. The figures were :—

					Gallons.	£
United States	1,596,555	49,810
Dutch Indies	1,778,183	44,260

From Japan 786,398 gallons, valued at 28,140*l.*, were imported.

Condensed milk.—In 1913 the market was shared by the following :—

						£
United States	18,540
Japan	15,550

In 1911 about 50 per cent. of the foreign import had been from the United Kingdom, but this had practically disappeared in 1913 ; some would, however, probably be included in the import from Japan.

Exports.—The leading exports to Japan and foreign countries were :—

						£
Rice	1,601,800
Sugar	1,580,160
Tea	670,570
Camphor	495,720
Copper	216,980
Camphor oil	172,620
Alcohol	153,880
Total	4,891,730

This amount is just under 90 per cent. of the total export trade.

The above leading items are the same as those of 1912, but the drop in value from 5,864,920*l.* (nearly 1,000,000*l.*) is a measure of the trade depression of 1913.

Sugar.—Although not the largest export during the year under review, sugar nevertheless exercised the greatest influence on the position of the trade of Formosa, and its exceptional decline was the outstanding feature of the depression of 1913. The year 1912 had itself shown a disappointing decrease, but in 1913 the export declined still further, the production falling below that of 1909. Not only did the export to Japan largely decrease, but, apart from a nominal amount to Manchuria, the small trade to foreign countries (175,520*l.* in 1912) disappeared entirely in 1913.

The average forecast of production had been 1,400,000 cwts. of centrifugals and 200,000 cwts. of brown sugar, but though no exceptional storms took place the output was still lower, being :—

					Cwts.
Centrifugals	1,240,660
Brown	166,545
Total	<u>1,407,205</u>

Which compares with 3,490,350 cwts. in 1912 and 5,379,737 cwts. in 1911.

In the matter of price the position improved somewhat during 1913. The average export value was 62 per cent. above that of 1911 and 34 per cent. over that of 1912, so that though the total amount involved was far smaller, the diminution was not so severely felt.

The decline in the output was principally due to the destructive effects of the storms of 1911-12. Apart from actual damage done, which took long to repair, the inferiority of the surviving cane and the difficulty of getting satisfactory new seed cane held everything back. Again, the high price of rice has caused local reversions to the planting of that cereal. Some of the soil used for sugar cultivation in Formosa is probably not the most suitable and, while ample water is generally available, the question of regulation in the rainy season and during storms causes difficulties, so that vicissitudes must be expected. Nevertheless, the decline in production during recent years must not be regarded as indicating any relaxation or abandonment of the industry. Elaborate and steady experimental work to improve cultivation is constantly under way, and with renewed efforts by the companies concerned a recovery in the production must be expected.

During 1913 the following quantities of seed cane were imported :—

From—					Pieces.
Japan	3,498,499
Java	2,047,296
Hawaii	902,039
Total	<u>6,447,834</u>

Many of these were rejected on account of rot, disease, insect pests, &c., so that only about 68 per cent. from Japan and 20 per cent. from the other countries were passed. Rose bamboo is the variety which seems most successful in Formosa.

The Government assistance granted for various purposes in connection with the sugar decreased considerably during 1913. The amounts disbursed were :—

For—					£
Fertilisers	30,160
Seeds and planting	16,190
Fighting cane pests and disease	2,230

A total of 48,580%. against 86,300%. during 1912.

A revised return gives the total of modern-style mills as 34 with a crushing capacity of 26,680 tons per day. In addition there are 39 old mills modernised with a capacity of 3,510 tons per day, and 228 old native mills of unknown but small capacity.

The area under cane during 1913 was about 187,720 acres. The average production in favourable circumstances is stated to be about 240 cwts. per acre, but though more than this has been obtained in several instances, the figure is probably an over-estimate. The percentage of extraction in favourable cases is given as high as 10·5 per cent.

A statement as to average expense for production of 10 per cent. sugar works out at about 1s. 2½d. per cwt. (8½d. for material and the balance for local transport, manufacturing, packing, interest, &c.), and allowing another 10½d. for sugar consumption tax, the cost per cwt. works out at about 2s. 1d.

A new disease, *Sclerospora sacchari*, was discovered affecting cane in some districts.

It seems to be intended by two or three sugar companies to undertake the manufacture of refined sugar, which was tried experimentally two or three years ago.

The estimated production for 1914 is considerably greater than that for 1913, though little confidence can be placed in forecasts in view of past experience. One calculation, admittedly optimistic, gives the following :—

					Cwts.
Centrifugals	3,200,000
Brown	430,000
Total ...					3,630,000

It may be said that the opening months of the 1914 season showed a great improvement and, given reasonable weather, a fair production seems likely.

Tea.—The year 1913 showed a further small decline in production and export from the figures of 1912. Including Oolongs and Pouchongs 23,193,056 lbs., valued at 654,460l., left the island, as compared with 24,023,306 lbs., valued at 689,656l., during the previous year.

The decrease in production of Oolong tea was mainly due to inferior quality of the later crops, due to lack of rain, and also want of care in preparation.

The United States market was sluggish throughout the year, and took only about 14,080,000 lbs., valued at 365,280l., a decline of about 340,000 lbs. and 17,300l. from the previous year.

The United Kingdom took about 985,000 lbs., valued at 26,280l., a considerable recovery on 1912. Hong-Kong took 160,000 lbs., worth 3,880l.; Australia, 161,600 lbs., worth 3,840l.; and smaller quantities went to China, Germany and Canada.

Pouchong tea showed a small decline in quantities and value from the previous year. About half went to China, and most of the remainder to the Dutch Indies, Hong-Kong and Singapore. This tea is almost entirely for Chinese consumption.

The 1914 crop is expected to be 10 per cent. under that of 1913.

Camphor.—The export of camphor declined from 8,649,319 lbs., worth 553,550*l.*, in 1912, to 7,860,854 lbs., worth 495,720*l.* It went to the following countries:—

	1912.	1913.
	Lbs.	Lbs.
United States	2,370,289	3,597,273
France	943,536	1,373,564
United Kingdom... ..	1,003,086	1,229,647
Germany	2,243,366	1,048,295
Japan	1,693,969	598,847
Austria-Hungary... ..	72,783	13,228
India	322,290	...
Total	8,649,319	7,860,854

It will be seen that the countries of destination have varied in their amounts very largely. Allowing for the decrease to Japan, the total quantity exported to other countries showed an increase.

The total production of camphor during 1913 was 5,999,538 lbs., to which must be added 3,573,602 lbs. of camphor remanufactured from 7,405,438 lbs. of camphor oil, making the total output for the year 9,573,140 lbs. Considerable stocks were in hand at the end of 1913.

The future of the camphor industry continues to excite some apprehension owing to possible exhaustion of the existing camphor forests and the tendency to diminution has been officially admitted. It is nevertheless claimed that present resources are sufficient to maintain an annual supply of about 6,500,000 lbs. for 18 years, and that by then the afforestation scheme will be far enough advanced for that quantity still to be produced. In 1913 about 3,000 acres were planted with 3,813,000 trees at a cost of 3,500*l.*, and as the scheme is to be continued for 12 years, large additions will be ultimately made to the existing reserves. It does not appear that many important new camphor forests are likely to be discovered, as the tree does not flourish more than 4,000 feet above the sea, so that the mountainous interior will probably contribute but little.

Every attention is being made to render the method of production more efficient. In addition to distilling from the leaves of the camphor tree, efforts are being made to utilise profitably the dwarf camphor tree, which ordinarily produces very little camphor. Again, the 7,000 stills used throughout the country have been or will be rebuilt to give more efficient results.

For 1914 the estimated production of camphor is 6,500,000 lbs.

Camphor oil.—The export of camphor oil increased both in quantity and value, being 4,842,549 lbs., worth 172,620*l.*, against 4,475,906 lbs., worth 159,401*l.*, in 1912. The whole export went to Japan.

The total production was 7,545,019 lbs., but as mentioned above a large quantity of camphor oil was remanufactured. The remanufacture of camphor oil leaves as by-products, brown oil, white oil, linalool, &c., which were exported to the value of 16,800*l.*

The estimated production of camphor oil during 1914 is about 8,400,000 lbs.

Rice.—The year 1913 had fortunately a record rice crop, a fact which considerably off-set the otherwise bad year. The crop was about 40,000,000 bushels of an estimated value of 6,750,720*l.*, being thus the most important production of the island. This meant an ample supply for Formosa's needs, while a good quantity was available for export; 156,700 tons, valued at 1,601,800*l.*, went to Japan against 90,752 tons, worth 1,047,446*l.*, in the previous year. Naturally the price receded somewhat, but not to a great extent; taking 1910 as 100, 1913 was still nearly 50 per cent. higher in export price.

It will be noticed that, notwithstanding the large export, there was also a considerable import of rice from Japan; this is due to the special liking of the Japanese population for their native grain.

Copper.—The production of copper during 1913 was 1,547 metric tons, valued at 100,890*l.* The whole output went to Japan.

Gold mining.—The total output of gold during 1913 was 38,006 ozs. troy, worth 158,780*l.*, a decrease of some 65,150*l.* over the previous year. The year 1914 is expected to be up to the average of 1913. This gold all comes from a few mines in the north. From time to time discoveries elsewhere in the island are announced, but so far none have proved important.

Silver to the value of 6,400*l.* was also obtained, a decrease of about 7,100*l.* on the previous year.

Coal.—The total output of coal from mines in Formosa during 1913 was 319,370 tons, valued at 123,260*l.*, an increase of 43,125 tons and 23,570*l.*

Kerosene.—The output of kerosene oil was 6,325 gallons, worth 12,640*l.*, a considerable advance over 1912. Hopes are freely expressed that Formosa will produce large quantities of petroleum, as indications are found in numerous places. Byoritsu at present yields the greatest quantity, but Banshoryo in the south of the island is regarded hopefully as a possible producing centre.

Timber.—The value of timber exported was 13,910*l.*, an increase of about 4,300*l.* over 1912. The production has not been as great as expected. Damage to the mountain railway at Mount Ari and delay in erecting a saw mill are given as the reasons for the slow development, but expense of transport and the consequent difficulty of finding a market were probably contributing causes. This industry is, however, now in full working order, and more definite progress is expected during 1914.

Pineapples.—The production of pineapples and the tinning industry are making slow but steady progress; 73,380 dozen of tinned pineapples, valued at 13,790*l.*, were made. The exports are given at 66,218 dozen, worth 16,170*l.*; the increase in value is presumably due to the addition of packing, transport, loading and other charges.

Hats.—The growing industry in *rinto* (pandanus) and other imitation Panama hats has received a very bad set-back, the total export falling from 9,270*l.* to 460*l.* It is alleged that experience has shown that the fibre of these hats does not keep its colour, which would account for the reduction apart from reasons connected with depression in trade.

The export of *rinto* leaf or fibre also fell off from 14,400*l.* to 10,340*l.*, all of which went to Japan.

Various industries.—Salt, which is a Government monopoly, was produced during 1913 to the extent of 1,458,000 cwts., valued at 25,140*l.*

Cocoanut tree and teak tree seeds have been imported by the authorities for experimental planting.

Sisal hemp has been cultivated for some time and machinery is being introduced experimentally to work the fibre to see if a successful industry can be started.

Standing of various ports.—As will be seen in Table 8, Keelung easily maintained its position as premier port; in fact, it has shown increased imports and exports, leaving the net depression in trade to be shared by the other leading ports. Tamsui still showed the largest direct trade with foreign countries, but a considerable part of it was junk traffic with China, while some of the Keelung trade to and from Japan was probably really with foreign countries. The decline in the trade of Takow was entirely due to the decrease in the export sugar and to the importation of a smaller quantity of sugar machinery.

Shipping.—In vessels engaged in the foreign trade of Formosa, 1913 showed but little change from the previous year; in vessels trading with Japan there was a small decline. The total of the former was 438 steamers of 792,724 tons entered in 1913 against 435 vessels of 806,944 tons during 1912; sailing vessels (practically all junks) numbered 969 of 34,513 tons against 971 of 33,950 tons. The steam vessels trading with Japan (all Japanese—this service counting as coastwise traffic) numbered 883 entries of 1,741,190 tons and sailing vessels 3 of 23 tons against 880 vessels of 1,876,734 tons and 1 vessel of 303 tons during 1912. The decrease in tonnage was a mark of the bad trade of the year.

In the matter of shipping Keelung, the leading port, showed little change from the previous year. In foreign-going steam tonnage that port's entries showed an increase of 21,496 tons, and in entries from Japan a decline of 26,373 tons, a net decrease of 4,877 tons. The other leading ports showed considerably smaller tonnage, except Anping, which was practically stationary. Takow especially showed a large decrease, owing to the bad position of sugar.

The total of shipping subsidies remains unchanged, and the services for which they are granted are shown in the following table:—

Service.	Steamers.	Trips Monthly.	Subsidy.
			£
Keelung to Kobe	4	8	} 33,590
Takow to Yokohama	2	2	
Coasting vessels	3	9	23,990
Tamsui to Hong-Kong	2	4	} 36,230
Takow to Canton	1	2	
Takow to Tientsin	2	2	} 9,700
To Foochow and Hong-Kong ...	1	2	
Total	15	29	103,510

British shipping declined still further from 43 steamers of 145,456 tons in 1912 to 37 steamers of 124,329 tons during 1913. The latter were distributed between Keelung (32 vessels of 111,921 tons) and Takow (5 vessels of 12,408 tons); no other port was visited. The tea trade was responsible for most of the vessels calling at Keelung, and the others were mostly on charter.

American shipping was also due entirely to liners calling at Keelung to load tea.

Harbour works. Keelung.—The year 1913 saw the completion of the second period of the Keelung harbour works and the commencement of the further works which should be completed gradually by 1920. At the end of 1913 the available area, 30 feet or more in depth, was 421 acres, with a further 58 acres between 24 and 30 feet, and 39 acres between 7 and 23 feet. No further quay walls were built during 1913, so that apart from 2,550 feet built already, there remains 2,988 feet (2,220 feet with a depth of 35 feet) to complete the general scheme. Landing and retaining sea walls total so far 12,666 feet with a further 630 feet to complete. Warehouses covering 59,040 square feet were built during 1913, making to date 126,216 square feet, while ultimately such warehouses (mostly steel, reinforced concrete or brick) will cover 273,816 square feet (6¼ acres). The accommodation available at present is for 4 steamers each of 6,000 tons alongside quays, and 6 steamers of 2,000 to 10,000 tons at buoys, with 2 vessels of 20,000 tons in the outer harbour.

Takow.—Considerable improvements were effected in the harbour during 1913. At a depth of 18 to 30 feet the inner harbour now extends to 130 acres and the outer harbour to 47 acres, with a further total area of 37 acres between 12 and 18 feet. Eventually the inner harbour will have 294 acres and the outer 72 acres, all dredged to 30 feet. The entrance has been widened to 350 feet, and is ultimately to be further enlarged to 500 feet; 2,910 feet of the quay wall have a depth alongside of 30 feet, and a breakwater, 2,280 feet long, is to be built. Two 15-ton and six 2-ton electric cranes are in position; the number of the latter is to be greatly increased. Steel warehouses, covering 43,200 square feet, have been erected, and others covering an additional 280,800 square feet are contemplated.

Anping.—Beyond dredging a long channel for small boats going to the steamer anchorage in the open, no harbour works have been carried out at this port during 1913.

Tamsui.—A considerable amount of dredging work in the river bed and on the bar was done during 1913, the main channel used by shipping being about 18,000 feet long by 360 to 600 feet wide. On the bar the depth is at present about 10 feet minimum at low water, the average rise of the tide being 8 feet. In the river channel the depth available for shipping ranges from 8 to 25 feet at low water. Above the dredged area the state of the river is as bad as ever. At the port a small reclamation work is under way to facilitate customs and landing purposes.

Railways.—On the railway to South Formosa communication from Kyukyokudo to Ako was completed, the distance built during 1913 being $4\frac{1}{2}$ miles. On the east coast the line was extended from Horin to Mataan, a distance of 7 miles. Some work was also done towards doubling the railway track between Keelung and Taihoku. The total expenditure for these works in 1913 was about 184,400*l*.

At the end of 1913 the mileage of the Formosan railways was as follows :—

	Miles.
Keelung to Ako (main line)	262·6
Daitotei to Tamsui (branch line)	13·2
Arisan (mountain) Railway	8·8
Kwarenko to Mataan (east coast line)	29·4
Mataan to Pinan (light railway)	81·5
Total	<hr/> 395·5 <hr/>

In addition to this there were some 940 miles of field railways owned by various companies, of which 233 miles were available for ordinary business ; while there were about 480 miles of trolley (push car) lines in various localities.

The steel bridge over the Shimo Tansui River was completed during 1913. With approaches the length is 5,007 feet, and it has 24 spans ; the cost of building is put down at 133,000*l*.

On the main line section, built during 1913, 60-lb. rails were used, and on the east coast light railway 25-lb. rails.

During 1914 the principal work is to be the extension of the east coast railway (between Basshisho and Suibi) and the doubling of the Keelung-Taihoku section, and perhaps from Keelung to Giran on the north-east coast ; the estimate for the works amounts to 97,300*l*.

Public works.—Apart from harbours and railways, the following were the principal public works undertaken during 1913 :—Power station in South Formosa, repairs to dam of power station near Taihoku, irrigation and water works in South Formosa, protective river embankments and road making. The aggregate spent for these services in 1913 was 182,580*l*., while in several cases there was a continuing expenditure. In the matter of public buildings a sum of about 129,900*l*. was disbursed during 1913, while a further 156,800*l*. is to be spent during 1914.

Budget.—The Budget for the year 1914–15 balances at 4,933,150/.
The figures are :—

	Revenue.	Expenditure.
	£	£
Ordinary	4,397,530	3,553,360
Extraordinary	535,620	1,379,790
Total	<u>4,933,150</u>	<u>4,933,150</u>

Report on the Trade of the Island of Formosa for the Year 1914

By MR. CONSUL HARRINGTON.

Total trade.—The total trade of Formosa, import and export, during 1914 is shown in the following table in comparison with the figures for the previous year :—

					1913.	1914.	Increase or Decrease in 1914.
					£	£	£
Imports	6,212,150	5,401,490	— 810,660
Exports	5,449,040	5,994,380	+ 545,340
Total	11,661,190	11,395,870	— 265,320

The import figures for 1914 included 1,328,510*l.* from various foreign countries and 4,072,980*l.* from Japan ; and the export figures were made up of 1,325,280*l.* to foreign countries and 4,669,100*l.* to Japan.

The decline in the imports was considerable, amounting to 13 per cent., and bringing the figures to below those for 1911. As a set-off the exports recovered a portion of the ground lost the previous year, the increase over 1913 being 10 per cent. The net decrease in total trade was 2·3 per cent. The following table gives the figures of trade for recent years :—

Year.					Imports.	Exports.	Total.
					£	£	£
1910	4,994,290	6,117,180	11,111,470
1911	5,440,410	6,603,150	12,043,560
1912	6,393,240	6,400,750	12,793,990
1913	6,212,150	5,449,040	11,661,190
1914	5,401,490	5,994,380	11,395,870

Condition of trade.—The year 1914, notwithstanding the partial recovery of exports, was regarded as a poor year. A factor in the prosperity of the island has been the capital expenditure in railways, harbour construction, sugar mills, &c., works involving considerable imports. The decrease in imports is a mark of slowing up of such works, a matter unfavourably affecting local business and labour. Again, though exports recovered somewhat from the decrease of 1913, the commodity which had saved the situation in that year—rice—was the source of much loss in 1914. Not only did the market in Japan drop by more than half the quantity of 1913, but prices dropped as well, while considerable loss was reported through owners holding on unduly long for a rise. Sugar, however, recovered considerably from the low figures of the previous year, and with small increases in camphor, alcohol, kerosene oil, &c., caused an advance on the exports of 1913. The whole trade, however, was greatly under the figures for 1911, and cannot be regarded with much satisfaction.

Effect of the war.—In view of the fact that Japan was a participating party in the war, the effect thereof in Formosa during 1914 must be considered very small. For one thing there are neither German nor Austro-Hungarian merchants or firms on the island; again, German and Austro-Hungarian shipping has not in recent years been extensive, so that though the figures declined greatly this must be regarded as mainly due to the general decline of foreign-going shipping. German and Austro-Hungarian commerce, also, does not bulk very largely even in normal years; in 1914 there was actually an increase in exports to Germany before the outbreak of war. There has been, of course, difficulty regarding exports held up or interned in German ships in neutral ports, while certain orders and contracts for goods from Germany have remained unfulfilled. Making allowance, however, for such incidents as are inevitable in a world wide war, the general disturbance has been very small.

Imports.—The total imports were 5,401,490*l.*, of which 4,072,980*l.* (over 75 per cent. as against 70 per cent. in 1913) is recorded as coming from Japan; it is certain, however, that the figure for the latter country includes many foreign goods from storage or transhipped in Japan.

The principal items imported direct from foreign countries during 1914 were :—

	£
Opium	188,400
Fertilisers (practically all oil cake) ...	171,850
Tobacco	81,550
Chinese paper	77,520
Kerosene oil	77,150
Cotton goods	69,390
Drugs and chemicals, various	64,670
Comestibles, beverages, &c.	57,840
Engines, machinery, &c.	48,530
Packing mats	48,210
Timber and planks	47,580
Beans, soja	46,620
Coal	33,580
Rice	30,490

Other imports were metals, iron pipes, porcelain and earthenware, tea-lead, China grass, rails, gunny bags, &c.

The principal imports from Japan were :—

	£
Provisions (mainly fish, tinned goods, vegetables, soy, &c.)	745,100
Cotton goods	504,380
Iron and steel goods	398,630
Fertilisers	210,130
Timber	178,410
Saké	142,480
Flour	137,120
Cement	117,580
Vehicles, instruments, machinery, &c....	111,480
Drugs, chemicals, medicines	97,150
Rice	90,940
Paper	88,180
Hosiery and clothing	87,060
Tobacco and cigarettes	85,720
Sugar and rock candy	74,970
Kerosene oil	63,570
Matches	58,930
Woollen and silk tissues... ..	51,500
Beer	51,240
Iron ore	50,940
Animals and plants	50,650
Japanese clogs and boots	41,150
Bean oil	40,300
Woodware	34,910
Dyes and paints	29,250
Railway sleepers	28,240
Lubricating oil	26,640
Beans	25,840
Copper	24,680

Other imports were yarns, gunny bags, coal, porcelain and earthenware, metals, clocks and watches, umbrellas, lamps, &c.

Practically every country enumerated in the customs returns showed a decline. India and the United Kingdom showed heavy decreases, as did also the United States, Persia, French Indies and Turkey. The exceptional decline of Indian imports was mainly in rice, opium and gunny bags. The decrease from the United Kingdom was largely in cotton goods, iron and steel goods, locomotives and wagons, &c.

The decline in imports from Japan was spread over a number of items of which timber, flour, cement, animals and plants, iron ore and sugar were the most important.

Locomotives and machinery.—A small increase took place in these imports. In the former, British imports had practically no part out of some 12,000*l.* coming mainly from the United States and also Germany; in the case of sugar machinery we maintained our lead, though not so completely as in previous years.

Railway material.—The imports, mostly rails and fittings, about 16,800*l.*, came nearly entirely from Germany; the United States, which had contributed by far the largest share in 1913, disappeared entirely from the returns in 1914.

Gunny bags.—The import of gunny bags fell off considerably, that from Japan, however, to a less extent than that from India, which was the sole supplier from foreign countries. The figures for 1914 were :—

					Pieces.	£
Japan	753,587	18,680
India	486,400	13,720

Textiles.—Although Japan increased her exports of cotton goods to Formosa and recovered the decline of the previous year, the imports from foreign countries decreased. So far as the latter were concerned the United Kingdom, though falling-off from 1913 relatively held her own. The figures for the foreign countries principally concerned are as follows :—

Sheetings and shirtings, grey and white—		Square Yards.	£
United Kingdom	...	562,543	7,540
Netherlands	...	47,970	650
Sheetings, coloured, and Turkey-reds—			
Hong-Kong (largely British)...	...	158,280	3,130
United Kingdom	...	68,986	1,210
Cotton satins and Italians—			
United Kingdom	...	561,582	17,660

In the matter of camlets the whole import came from the United Kingdom; and in woollen cloths and serges, the decline was entirely in goods from Germany, viz. :—

				Square Yards.	£
United Kingdom...	12,189	1,040
Germany	20,118	2,440

It will be noticed that the United Kingdom supplies a cheaper grade of goods.

Kerosene oil.—Imports from Japan showed a very great increase (126 per cent. over 1913), which was achieved at the expense of its foreign competitors, both America and, to a greater extent, Dutch Indies showing a decline; the figures were :—

					Gallons.	£
Japan	2,119,340	63,570
Dutch Indies	1,316,870	43,830
United States	1,301,473	33,320

There was, however, a large export abroad of 1,003,649 gallons, worth 25,490*l.*, much of which was oil from Japan. Nevertheless with the gradual development of wells in Formosa, and more especially in Japan, aided by the import duty, the position of foreign oil is becoming more difficult.

Coal.—Imports of coal from Japan declined over 50 per cent., those from foreign countries (practically all from China ports) increased slightly.

Exports.—The leading exports to Japan and foreign countries were :—

	1913.	1914.
	£	£
Sugar	1,580,160	2,824,960
Rice	1,601,800	704,640
Tea	670,570	694,200
Camphor	495,720	546,890
Copper	216,980	209,610
Alcohol	153,880	198,610
Camphor oil	172,620	168,120
Total	4,891,730	5,347,030

In the latter year the above six items account for just over 90 per cent. of the total exports.

Sugar.—In 1913 sugar regained its place as the leading export of Formosa, and though the high figures for 1911 and previous years have not yet been reached, the disastrous effect of the 1912 storms and more recent vicissitudes seem to have been overcome. The production during the year 1914 (November, 1913, to October, 1914) was :—

	Cwts.
Centrifugals	2,625,434
Browns	341,290
Total	2,966,724

As compared with 1,407,205 cwts. in 1913 and 3,490,350 cwts. in 1912.

Although no very exceptional damage was caused by storms, still in the aggregate, damage which was suffered by storms, floods, &c., was estimated at about 30 per cent. ; but for this the production would have tallied fairly well with anticipations at the beginning of the year.

Prices declined somewhat, so that the value of the export did not increase as much as the quantity. Relatively on export values the decline was nearly 20 per cent.

The quantity of seed cane imported during 1914 was :—

From—	Pieces.
Japan	1,646,471
Java	58,573
Hawaii	45,554
Total	1,750,598

The Government assistance granted during the fiscal year 1914 for various purposes connected with sugar again decreased considerably. The amounts disbursed were :—

	£
Fertilisers	3,240
Seeds and planting	7,450
Fighting cane pests and disease	2,450

A total of 13,140*l.* against 48,580*l.* during 1913.

The latest official returns of the mills in operation gives the total of modern style mills as 36 with a crushing capacity of 27,070 tons per day. There are also 39 old mills with a crushing capacity of 3,190 tons per day, besides 220 old native mills of unknown but small capacity.

The area of fields under sugar cane during 1914 was 215,198 acres, producing on an average (estimated) $14\frac{1}{2}$ cwts. of sugar.

Further manufacture of refined sugar was made, and early in 1915 shipments were made to Hong-Kong which, however, were probably intended for re-export elsewhere. While the war doubtless gave an impetus to this export, it is only the realisation of hopes long existing, and efforts will not be spared to maintain a position in foreign markets.

For 1915 the estimated production is as follows :—

					Cwts.
Centrifugals	2,975,302
Browns	366,480
					<hr/>
Total	3,341,782
					<hr/>

Tea.—There was a considerable increase in the export of both Olongs and Pouchongs during 1914. For the former the figures were 16,508,933 lbs., worth 432,670*l.*, against 15,912,244 lbs., worth 414,040*l.*, during 1913.

For Pouchongs the total was 7,605,122 lbs., worth 252,560*l.*, against 7,280,812 lbs., worth 240,420*l.* These figures exclude small quantities of black tea, dust tea, &c.

The total crop of Olongs was estimated at 430,000 half-chests in 1914 against 415,500 half-chests for the previous year.

The crop was on the whole of good quality, spring and early summer showing the best value, while the late summer and early autumn suffered from unsettled weather.

The United States, which is the principal market, took about 13,649,600 lbs., valued at 360,800*l.*, a decline from the previous year of about 430,400 lbs. and 4,480*l.*

The United Kingdom took 828,700 lbs., valued at 21,320*l.*, a decline of 156,300 lbs. and 4,960*l.* from 1913. Hong-Kong took 171,915 lbs., worth 4,050*l.* ; Australia 200,903 lbs., valued at 4,380*l.* China, Canada and Germany took smaller quantities.

The increased export to Japan was, however, most noteworthy, rising from 409,827 lbs., worth 11,490*l.*, to 1,557,015 lbs., valued at 39,320*l.*, in 1914 ; most of this, however, was intended for other countries.

Actually the United States is credited with receiving over 92 per cent. of the total crop, so that the quantity sent to Japan must practically all have been re-shipped there.

Shipments viâ Suez (which include some consignments for America as well as Europe) fell off somewhat, due to higher freight and war risks.

The market in America was normal till the outbreak of the war. Then prices dropped owing to difficulties in financing, but quickly

recovered when banks resumed business. However, war risk rates and high exchange rates between London and New York made the laying down cost high.

Over 50 per cent. of Pouchongs went to the Dutch Indies and nearly 40 per cent. to China; the small balance was divided between Hong-Kong and Singapore.

The crop of both Oolongs and Pouchongs for 1915 is estimated slightly to exceed that for 1914.

Camphor.—The export of camphor increased from 7,860,854 lbs., worth 495,720*l.*, in 1913 to 8,853,597 lbs., worth 546,890*l.*, in 1914. It went to the following countries :—

					1913. Lbs.	1914. Lbs.
United States	3,597,273	3,477,959
Japan	598,847	2,482,740
Germany	1,048,295	1,464,306
United Kingdom	1,229,647	703,052
France	1,373,564	633,607
India	72,091
Austria-Hungary	13,228	19,842
Total					7,860,854	8,853,597

Exports of camphor vary very greatly each year in the countries of destination. In 1914 Japan more than regained the position she lost in 1913, but much of the camphor exported there was re-exported to other countries. The United Kingdom and France show a decrease considerably below the figures for 1912 and 1913.

The total production of camphor during 1914 was 6,029,338 lbs., to which must be added a quantity re-manufactured from camphor oil; about 459,805 lbs. of camphor (refined, re-manufactured and crude) remained in stock at the end of 1914.

During 1914 about 3,100 acres were planted with 14,088,457 trees, and a similar area is expected to be planted in 1915.

The area of camphor forests at present is about 1,990 square miles, including a few new camphor woods discovered during 1914; of this total nearly 600 square miles are as yet unworked.

Camphor oil.—The export of camphor oil declined slightly in quantity and value during 1914; 4,774,423 lbs., valued at 168,120*l.*, leaving the island as compared with 4,842,549 lbs., valued at 172,620*l.*, in 1913.

The total production was 7,989,571 lbs., leaving a large margin over exports for re-manufacture of camphor. At the end of the year about 720,687 lbs. of camphor oil were on hand.

Rice.—There was a great decrease in the production of rice in 1914, only 22,573,400 (estimated) bushels of a value of 4,469,360*l.* being obtained against about 40,000,000 bushels, valued at 6,750,720*l.*, in 1913. Not only was there a much smaller export (83,394 tons, worth 704,640*l.*, against 156,700 tons, worth 1,601,800*l.*), but much loss was caused by keeping back rice in the endeavour to realise higher prices. Though nominally the value of the rice was maintained at a high level, this was reported to be partly due to actual loss of rice stored, while

relative export values dropped greatly in sympathy with the low market in Japan and elsewhere.

Copper.—The production of copper during 1914 was 1,846 tons (of 2,240 lbs.), valued at 107,780*l.* There are reported to be two new mines in the Giran district and the production for 1915, it is estimated, will be 10 per cent. over 1914.

Gold.—The production of gold during 1914 is given as 3,673·3 ozs. troy, valued at 186,610*l.*, besides 233·4 ozs. troy of gold dust valued at 8,530*l.* The total, 3,906·7 ozs. troy, worth 195,140*l.*, is an increase of 36,360*l.* over the previous year.

Kerosene.—There was for the first time a considerable export of kerosene oil—1,003,649 gallons, valued at 25,490*l.*, leaving the island. Though this was partly on account of increased product of Formosan oil it was also largely due to re-export of Japanese oil. While some progress is reported as to the Formosan wells this applies to the older districts rather than to newer ones. The latter have not made during the year the progress which was expected.

Standing of various ports.—As shown by Table 8, Keelung maintained its position as premier port. Takow, however, had easily the largest export total, thanks to the improvement in the sugar trade; and Tamsui had the greatest trade direct with foreign countries, though the figures are illusory in view of the fact that many foreign goods come viâ Japan to Keelung.

Shipping.—In the aggregate 1,273 steamers of 2,524,415 tons entered Formosan ports during 1914 against 1,324 vessels of 2,533,937 tons in 1913. Whereas, however, the tonnage from Japan (coasting trade) increased by just over 102,000 tons, that from foreign countries showed a decline of over 113,000 tons.

British shipping declined from 37 vessels of 124,329 tons to 20 vessels of 63,602 tons, and German shipping from 10 vessels of 25,797 tons to 1 vessel of 2,056 tons. Doubtless the war had some effect in reducing totals, but foreign shipping to Formosan ports is by no means regular, so that it is difficult to estimate the exact influence, especially as the principal neutral flag showed a decline (United States 65,280 to 40,651 tons). Foreign shipping has steadily decreased in recent years; the reservation of the trade between Japan and Formosa to Japanese shipping as coastwise traffic, and subsidy to various foreign-going lines, places the Japanese flag in too favourable a position for much competition. There is no regular foreign line at all, such boats as do come being only to get shipments of tea, bunker coal or on charter with machinery, &c.

Subsidies to Japanese lines remain the same as last year, 103,510*l.* for 15 steamers making altogether 29 trips monthly to various points—Japan, Hong-Kong, Canton, Tientsin, &c. The only change (from January 1, 1915) is that the two steamers on the Tamsui-Hong-Kong line now run on to Keelung, thus facilitating the transshipment of goods from Japan to Hong-Kong and Southern China ports and making easier the handling of heavy cargo by the superior equipment of Keelung Harbour.

Harbour works. Keelung.—A certain amount of continuing work was done in the scheme of improvement to be finished in 1920, and

described last year. No material change took place in the general accommodation except that a 30-ton electric crane was added. The work remaining to be done is principally extension of wharves, walls and breakwater, land reclamation, road building and erection of further warehouses.

Takow.—Considerable work was done in 1914 in deepening the harbour and removing rocks near the entrance. There is now an area of 140 acres in the inner harbour over 24 feet in depth. A short breakwater is under construction. Four more 2-ton cranes are reported to have been added to the equipment.

Anping.—As during 1913, the only work done at Anping Harbour was the dredging of a boat channel to the anchorage in the open. The channel is now 5 feet deep.

Tamsui.—About 7 acres was further dredged during 1914 in the river channel which constitutes Tamsui Harbour for a depth varying from 8 to 15 feet. The annual dredging of the bar at the mouth necessary to maintain a minimum depth of 10 feet at low water was also carried out.

Railways.—During 1914 11·8 miles of railway (between Mataan and Basshi, on the east coast) was thrown open to traffic, while a further 5·8 miles was also built but not operated; 60-lb. rails were used in this new construction. On the Keelung line a further 2·2 miles of track was doubled. The bridgework was also finally completed on the Shimotansui River. The total cost of construction work during 1914 was 99,300*l.*, while during 1915 another 56,000*l.* is to be spent.

During 1914 damage to the extent of 46,000*l.* was done by storms, &c., mostly in the washing away of three bridges.

The total length of railways in Formosa is as follows :—

	Miles.
Government main line	312
Arisan Works line	40·9
Narrow gauge line—	
Open to public... ..	254·3
Private use (plantations, &c.) ...	703·2
Trolley (push car) lines	601·1

Public works.—The principal public works during 1914 included :—

The Tainan waterworks building for 268,500*l.* spread over a period of years.

The Ako waterworks building for 30,600*l.* spread over a period of three years from 1914.

Irrigation works at the River Nisoko (5,400*l.* spent in 1914).

Electric power works at Dorowan.

River embankment at Banka and Daitotei, suburbs of the capital Taihoku; this is a high wall with narrow roadway on the river side made of reinforced concrete ultimately to extend for some miles along the river to prevent inundations from the river floods which annually cause great damage in the capital and vicinity.

Table 1.—TOTAL Value of Trade with Japan and Foreign Countries during the Year 1914.
